“Solution⁴ Feet beats White Line Disease”

“I have found Solution⁴ Feet to be a highly effective treatment for white line disease, the benefits of Solution⁴ Feet Matrix are particularly evident when large amounts of infected hoof horn have been removed. Being a keratinous material, Matrix intimately packs cavities in the hoof wall, supporting the surrounding hoof, facilitating normal function and providing a consistently clean environment for new horn growth. Weight bearing continuously forces disinfectant into the edges of the defect throughout the inter-shoeing interval.

Solution⁴ Feet Matrix is excellent under the branches of a shoe or under frog and sole pads. The sole and frog sweats between shoeings but Matrix keeps the hoof “fresh” and allows natural exfoliation”.

Alan Bailey says “Solution⁴ Feet Matrix provides an easy to apply, effective treatment for white line disease and other horn infections”.

Why don't *you* change to an oxygen permeable, non-toxic hoof disinfectant which the experts recommend and use?
